1   **DB-6 (databases): XML query processing: QFilter: fine-grained run-time XML access control via NFA-based query rewriting**   ■
Bo Luo, Dongwon Lee, Wang-Chien Lee, Peng Liu
November 2004 **Proceedings of the thirteenth ACM international conference on Information and knowledge management CIKM '04**
Publisher: ACM Press
Full text available: 📄 pdf(351.32 KB)   Additional Information: full citation, abstract, references, citings, index terms

At present, most of the state-of-the-art solutions for XML access controls are either (1) document-level access control techniques that are too limited to support fine-grained security enforcement; (2) view-based approaches that are often expensive to create and maintain; or (3) impractical proposals that require substantial security-related support from underlying XML databases. In this paper, we take a different approach that assumes no security support from underlying XML databases and exa ...

Keywords: XML security, data security and privacy, query rewriting

2   **A framework for implementing pluggable type systems**   ■
Chris Andreae, James Noble, Shane Markstrum, Todd Millstein
October 2006 **ACM SIGPLAN Notices , Proceedings of the 21st annual ACM SIGPLAN conference on Object-oriented programming systems, languages, and applications OOPSLA '06**, Volume 41 Issue 10
Publisher: ACM Press
Full text available: 📄 pdf(294.23 KB)   Additional Information: full citation, abstract, references, citings, index terms

Pluggable types have been proposed to support multiple type systems in the same programming language. We have designed and implemented JavaCOP, a program constraint system for implementing practical pluggable type systems for Java. JavaCOP enforces user-defined typing constraints written in a declarative and expressive rule language. We have validated our design by (re)implementing a range of type systems and program checkers. By using a program constraint system to implement p ...
